A Professional Job Training for Ground Crew
# DCS training program!

"
Anyone can easily learn DCS with different types of DCS training program
"

What is DCS?

While CRS (Computer Reservation System) reserves a flight and issues an e-ticket, DCS (Departure Control System) checks the information on the e-ticket, changes and amends the journey information before it prints out the final boarding pass and baggage tag.

Ground Crew Education

URIELSOFT

DCS TRAINING PROGRAM

Urielsoft,

With an aim of providing the best aviation service solution, it designs, develops and supplies the most optimized solutions and devices needed to perform tasks in the fields of air transportation and operation.
Only the Expert Aviation System Developer Can make the Best DCS Training Program.

Urielsoft is an expert company specialized in developing aviation service solutions and devices in Korea. With over 10 years of experience in developing airline and airport systems, Urielsoft has developed DCS and DCS training program for airlines.

Similar Environment
Provide identical funtions as a real check-in system, so that quickly adapt to on-site check-in tasks

Customizable
Enable to customize user interface and functions by customer's request

Cost Effective
Provide a high standard education at a reasonable price

Proven Program
Proven program that is used in local ground crew academies for many years

DCS Training Program

A DCS training program allows students to practice DCS as if he/she is encountering a real-life situation by providing an identical environment with the real system, so that he/she can get used to the tasks at the counter. It educates how to perform tasks related to the boarding procedure such as issuing a boarding pass, assigning seats, handling baggage, etc. for the passengers who have made a reservation, and other general check-in counter services.

* Features
• Customizable UI and function according to the customer's request
• Identical functions with the actual check-in process that allows those who have completed the training to perform any on-site check-in tasks immediately
• Easy training process with user-friendliness

* Functions
• Assigning seats, handling baggage, issuing boarding pass and baggage tag for passengers
• Handling "change, block, protect" of the seats
• Dealing with "flight assign", "gate message" and all types of "editing"
• Utilizing airline entry

Hardware Compatibility

Urielsoft's DCS is compatible with every hardware that is necessary in check-in process.
